

5 THINGS TO CONSIDER WHEN CHOOSING YOUR MEDICAL PACKAGING

1 **SIZE & WEIGHT** | Is the size of the package appropriate for the product?

2 **SHARPS** | Does the product have any sharp components or rough edges that could damage the packaging and cause a breach in the sterile barrier?

3 **BARRIER** | Are any specific barrier properties required? Is the product sensitive to light, moisture, or gas?

4 **STERILIZATION** | What sterilization method does your product require? Is a breathable substrate required?

5 **DISTRIBUTION** | What distribution channels will be used when shipping the product? Be sure to consider climates, altitudes, and handling methods that can affect the package during transit testing.
